Profile

Final-year Computer Science student and Frontend developer specializing in React, Next.js, and TypeScript, with hands-on experience delivering production web applications. Skilled in building responsive interfaces, integrating REST APIs, and managing containerized deployment and CI/CD workflows using Docker and Nginx.

Education

Bachelor of Computer Science / *Misr University for Science and Technology* Oct 2022 – Jun 2027

- Relevant Coursework: Data Structures, Algorithms, Database Systems, Operating Systems, AI, Machine Learning, Networks, System Analysis and Design, Software Engineering

Projects

ERP System – Production-Deployed Business Management Platform / *Commercial Client Project* 2026

- Led frontend development of an Arabic-first ERP platform, delivering responsive, role-based workflows for sales, purchasing, inventory, finance, human resources, and reporting using Next.js, React, and TypeScript.
- Integrated the frontend with Spring Boot REST APIs and implemented authentication-aware navigation, validated forms, reusable interface components, and server-driven data workflows.
- Managed production deployment to a Hostinger VPS using Docker Compose, Nginx, PostgreSQL, Redis, HTTPS, and environment-specific configuration.
- Established CI/CD pipelines using GitHub Actions for automated validation, builds, and deployment while coordinating with the backend developer responsible for server-side services and core business logic.

Voyage – AI-Powered Travel Booking Platform / *Graduation Project, MUST* 2026

- Contributed to a full-stack travel booking platform integrating flights, hotels, tours, and packages into one bookable system.
- Integrated frontend interfaces with backend APIs to support booking workflows, user sessions, and personalized interactions.
- Worked with a team using Spring Boot 3, Spring Security 6, JWT, JPA, Redis, MySQL, React (Vite), and Google Maps API.
- Supported frontend integration for an AI chatbot connected to booking and user-history data.

Savoy – Hotel Booking System / *Self-Initiated* 2025

- Full-stack hotel reservation system with real-time room browsing, booking workflow, and admin inventory dashboard.
- Stack: React, Node.js, MySQL.

Mini Amazon – E-Commerce Marketplace / *Collaborative Project* 2025

- Developed the frontend for a multi-vendor e-commerce marketplace with Admin, Merchant, and Customer interfaces.
- Built React screens for product browsing, cart management, role-based dashboards, and order-related user flows.
- Integrated frontend components with backend APIs developed by a teammate using Laravel PHP and PostgreSQL.

Unity 3D First-Person Shooter / *Academic Project* 2024

- Developed a 3D FPS in Unity implementing player movement, shooting systems, physics behavior, and camera control.
- Engineered an enemy AI system featuring intelligent bot tracking and player detection using navigation meshes and line-of-sight mechanics.
- Structured game architecture using scenes, prefabs, and modular gameplay scripts.

Technical Skills

Programming	JavaScript, TypeScript, Python, C++
Frontend	Next.js, React.js, Vite, HTML5, CSS3, REST API integration, responsive and RTL design
Backend	Node.js, REST APIs
DevOps	Docker, Nginx, GitHub Actions, Linux VPS deployment
AI / LLM	LLM integration, prompt-based AI features
Databases	PostgreSQL, MySQL, Redis
Tools	Git/GitHub, Postman, VS Code

Languages

Arabic: Native English: Upper-Intermediate (B2)
